PROTOTYPE 2

# Peek states

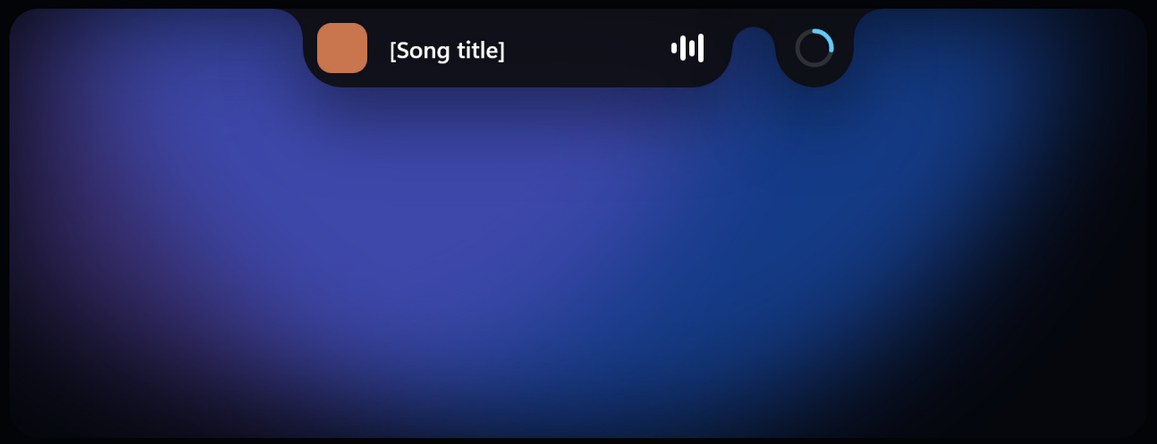

Always at the top centre. Solid, quiet, and only as wide as what it shows

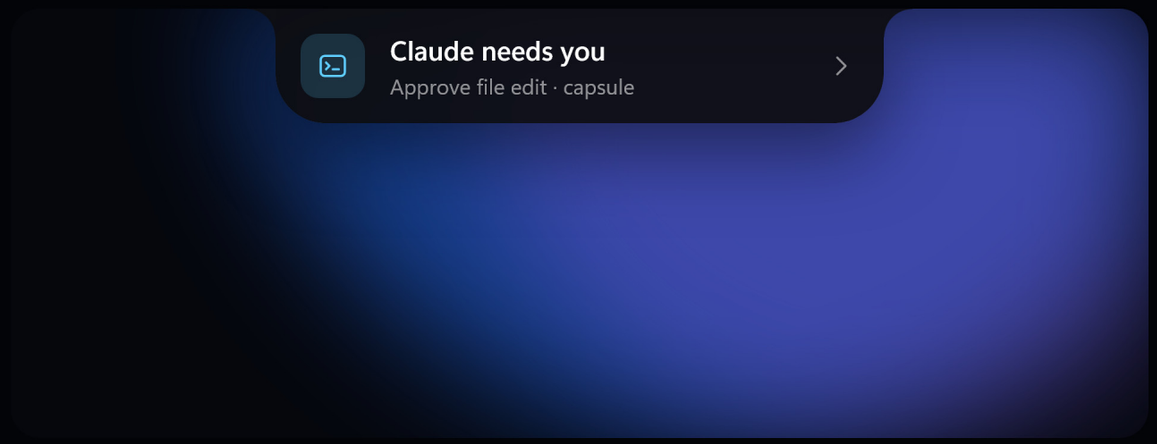

**Idle**
Just the time. Hover acknowledges, then opens on intent

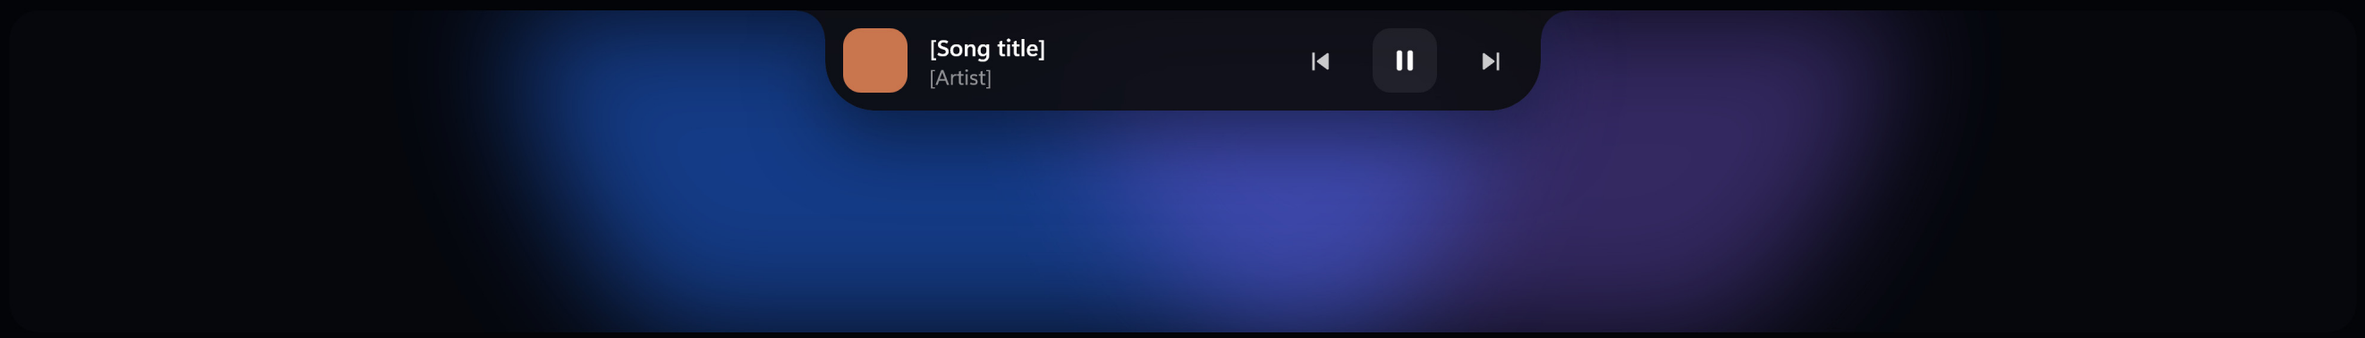

**Music**
Art, title and live bars. Controls appear on hover

**Dual**
Music plus a working agent. Joined by one round arch, so it reads as a single shape

**Pop · needs you**
The only state that uses the accent. The whole card opens the terminal

**Music · hovered**

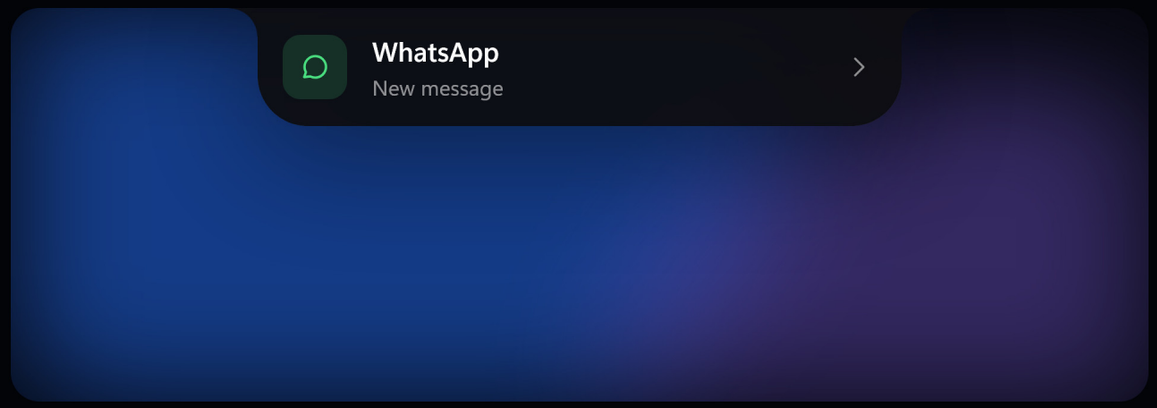

PROTOTYPE 2

# Notifications and forgiveness

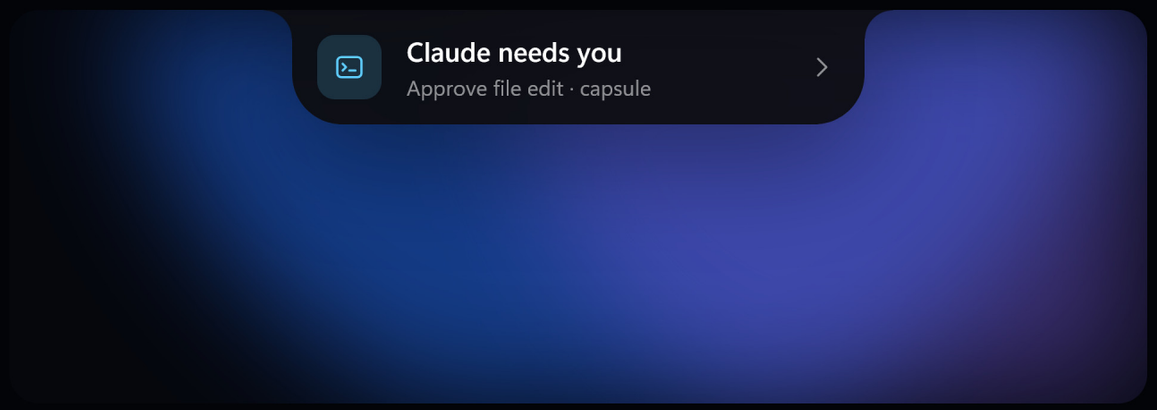

Pops grow out of the peek for about 5 seconds, then shrink back into it

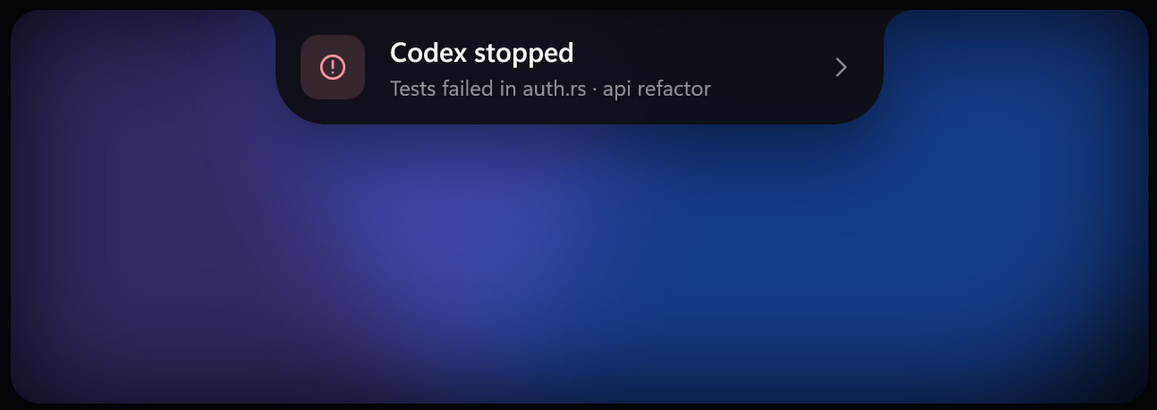

**Message · details on**
Sender, app and a two-line preview. Clicking opens WhatsApp

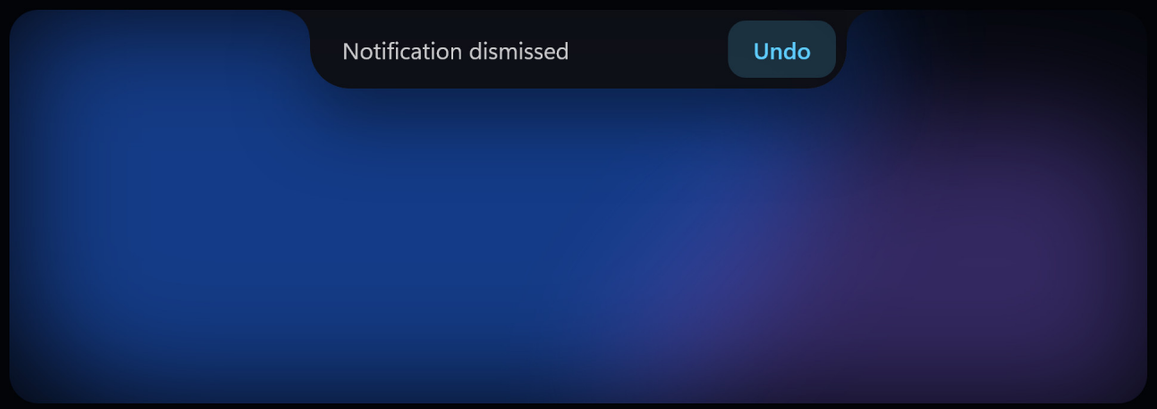

**Message · details off**
App name only, for when someone can see your screen

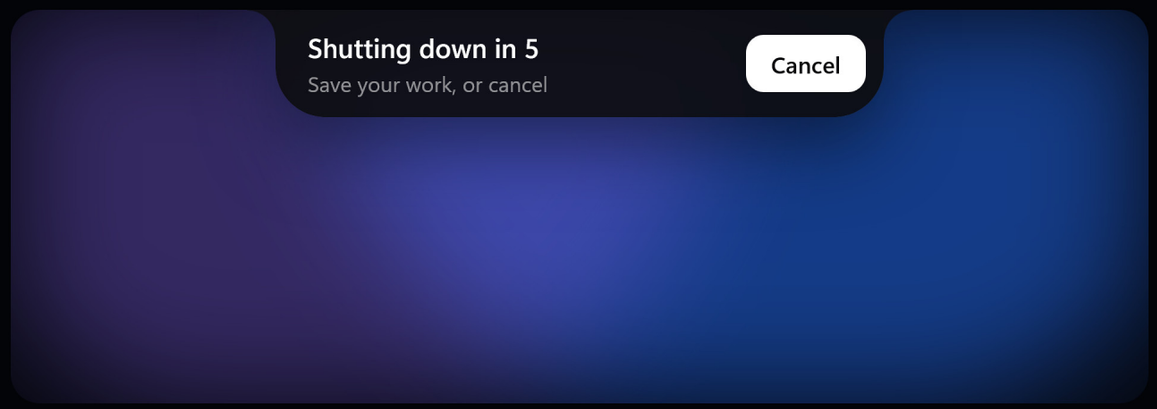

**Agent · needs you**
Accent tint because it's waiting on you. The whole card opens the terminal

**Agent · failed**
Same shape as success. Only the tint and the words change

**Dismissed · Undo**

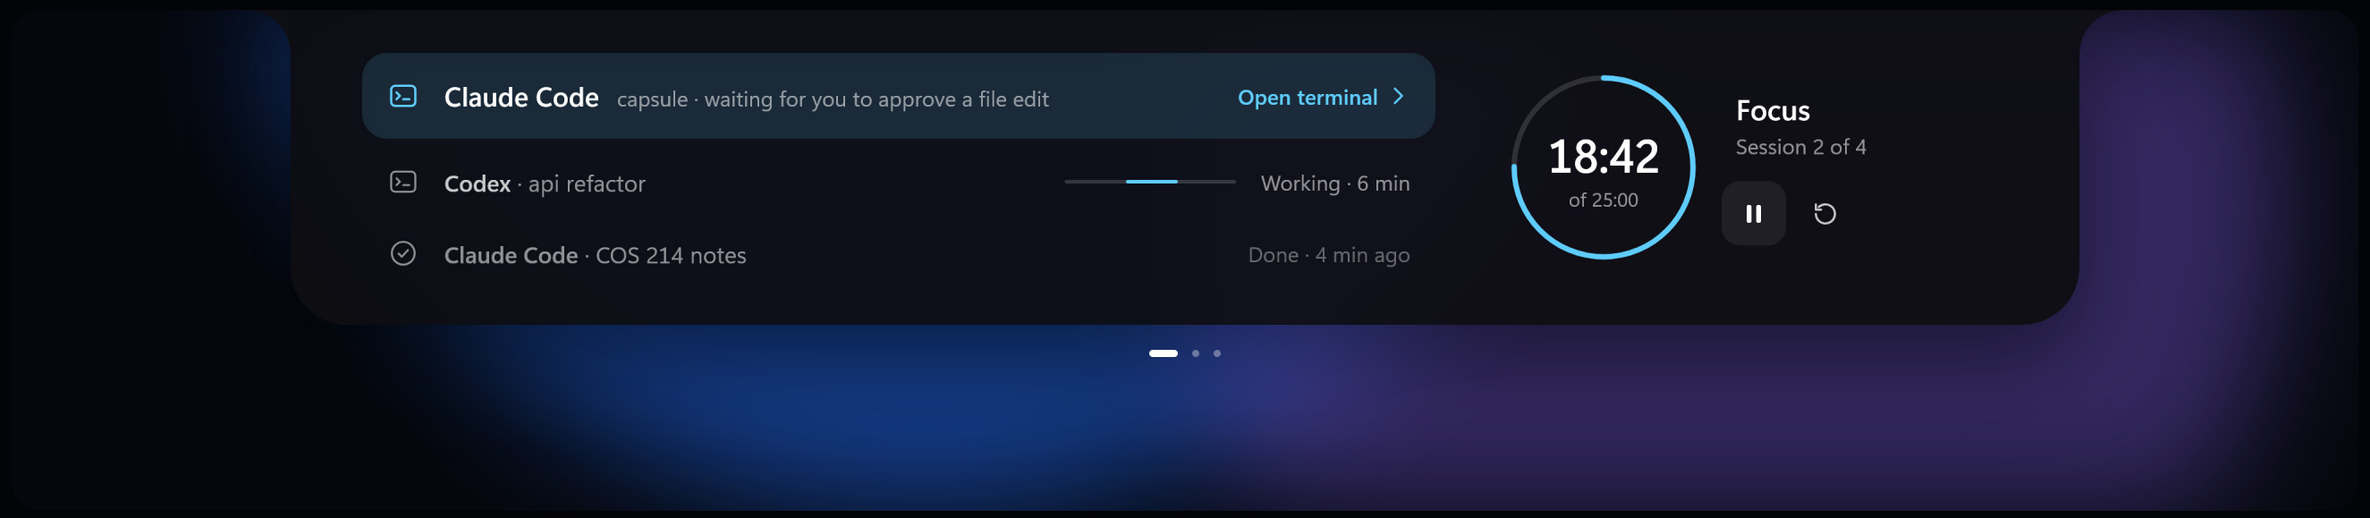

**Power · countdown**

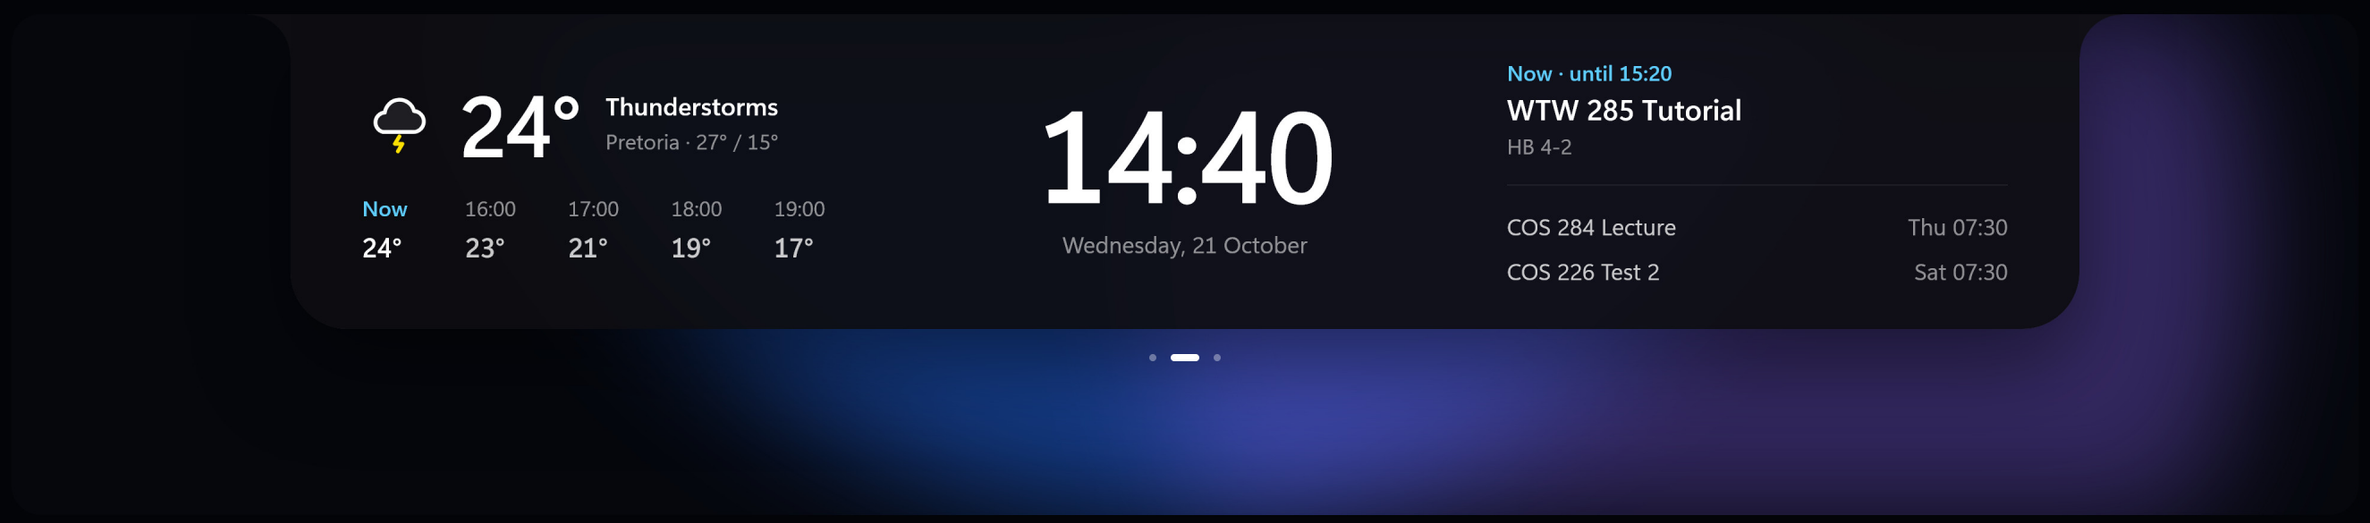

PROTOTYPE 2

# Expanded screens

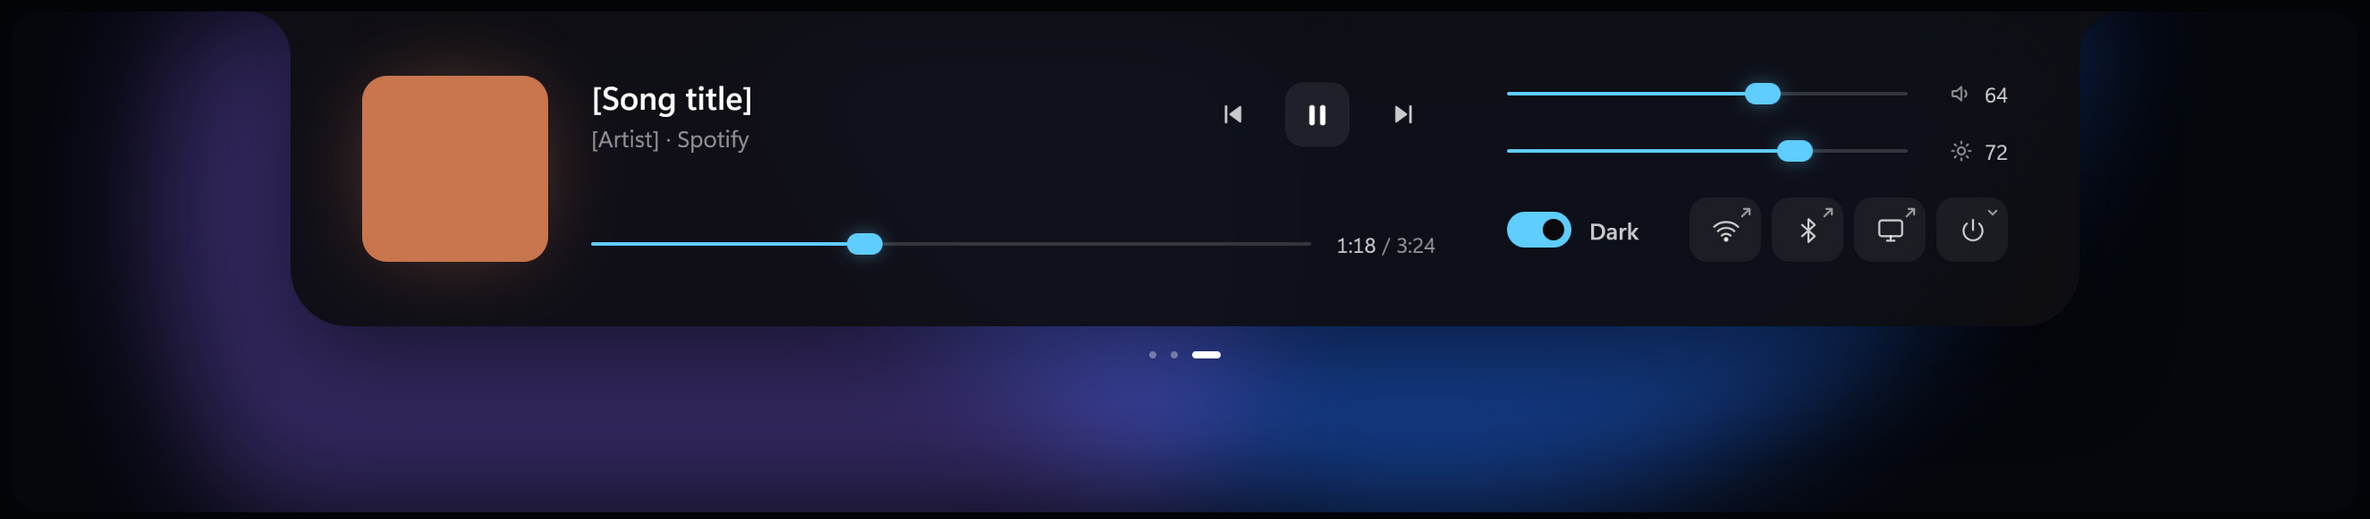

1000 × 176. Swipe or use ← → between three screens. Main is in the centre

**Left · Your widgets**
Agent board and focus timer. The screen you set up yourself

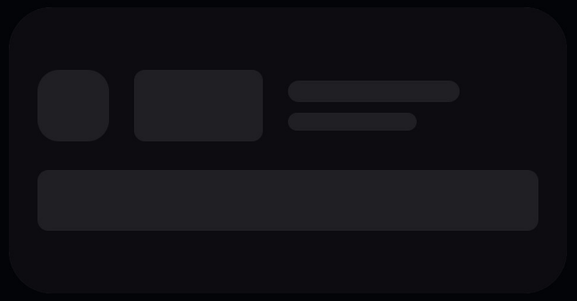

**Centre · Main**
Weather, time and calendar. Opens here every time

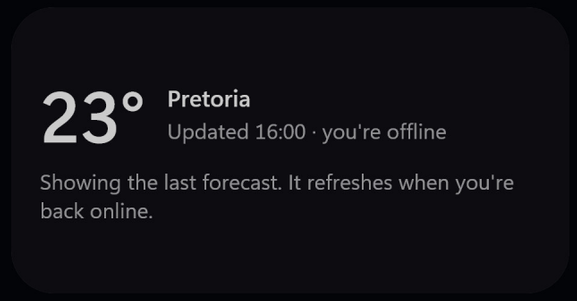

**Right · System**
Now playing, volume, brightness, Wi-Fi, Bluetooth and power

# Every state

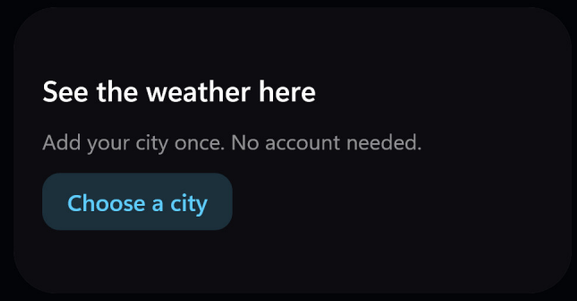

What strangers see before anything is set up, and what everyone sees when something goes wrong

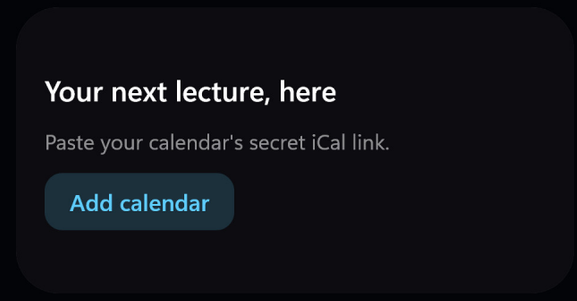

**Weather · loading**
Placeholders hold the exact layout, so nothing jumps. Static, no shimmer.

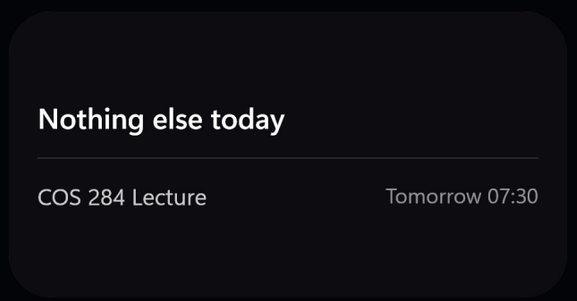

**Weather · offline**
Keep stale data, label its age, say what happens next.

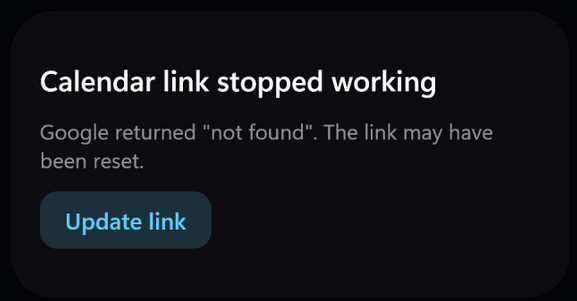

**Weather · not set up**
An invitation, not an error. One verb button.

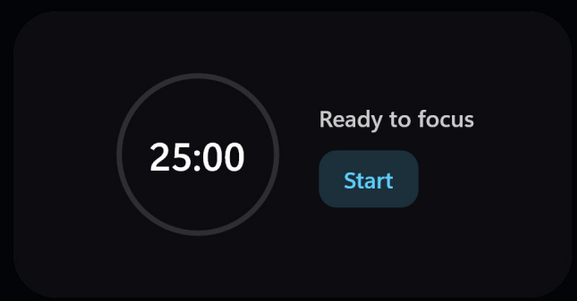

**Calendar · not set up**
Says the benefit first, then the one step.

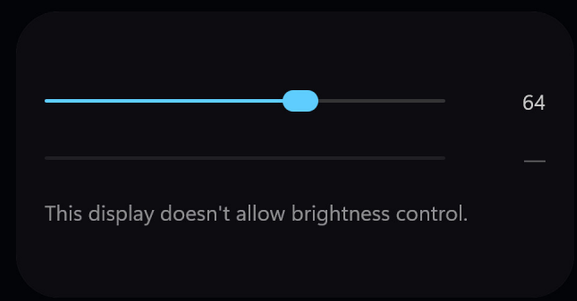

**Calendar · free rest of day**
Sparse, not empty: show what's next.

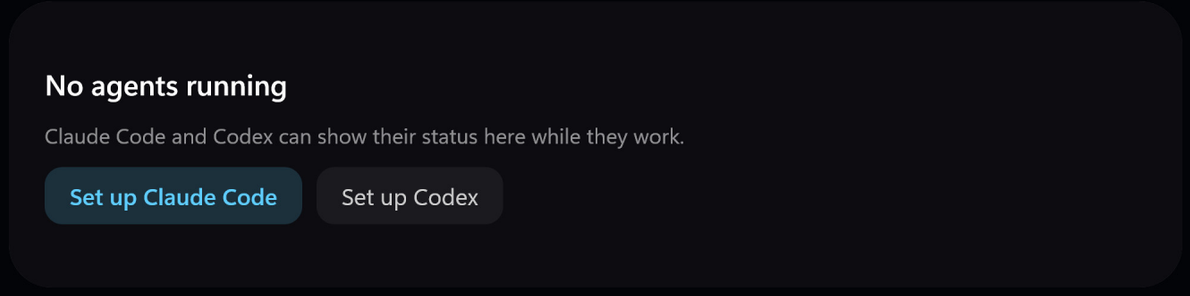

**Calendar · error**
What happened, why, and the fix. No error codes.

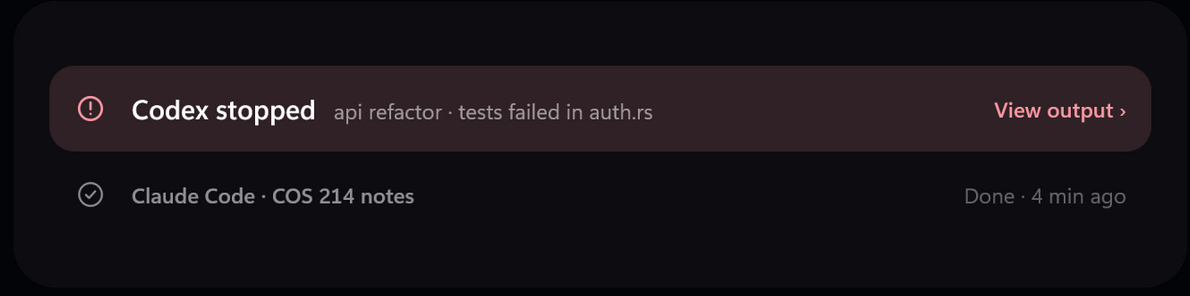

**Timer · idle**
The default is useful: 25 minutes, one press.

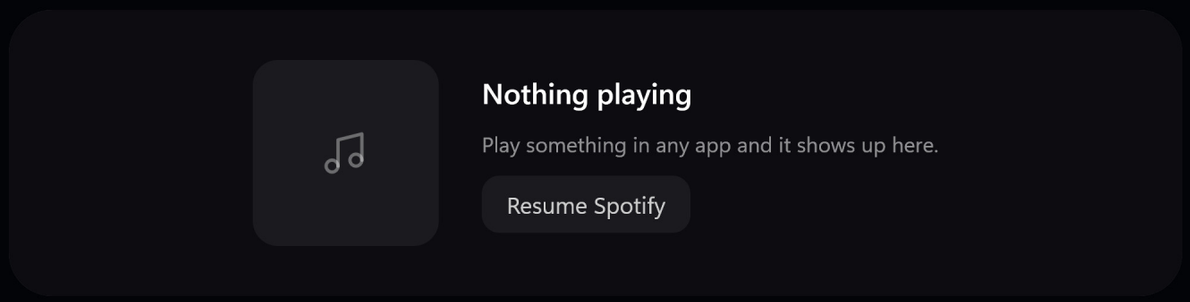

**System · unsupported monitor**
Disabled with the reason in plain words.

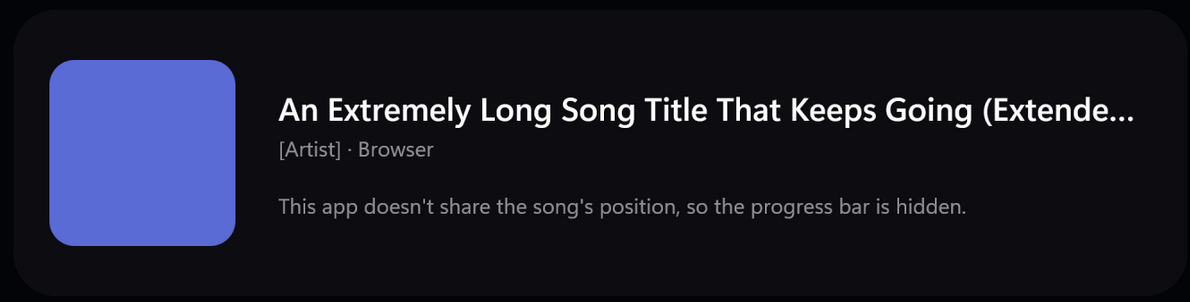

**Agent board · empty**
The empty state teaches the main feature.

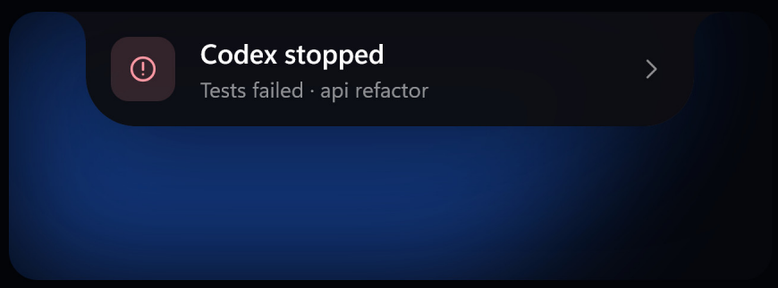

**Agent board · failed**
Errors use the same flat selection, in a soft red, with a specific reason.

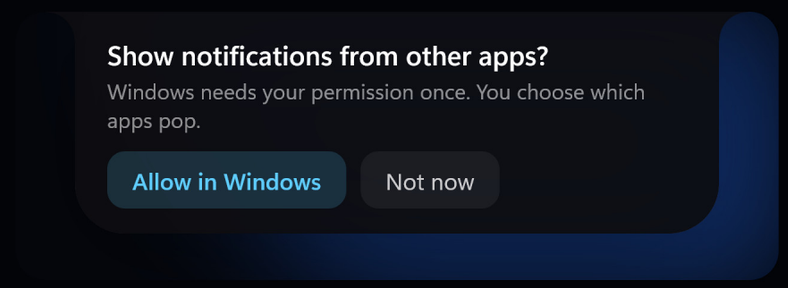

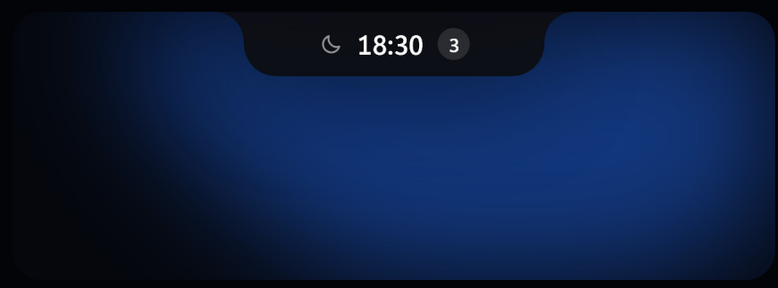

**Now playing · nothing**
Offers the last app instead of a dead end.

**Now playing · long title, no position**
Long text truncates on one line; missing data hides, never fakes.
